Technical Skills

Frontend & Architecture: React (v19+), TypeScript, JavaScript (ES2023+), HTML5, SCSS, Component Architecture, Rendering Strategies, Monorepos, Microfrontends, Performance Optimization

State, Data & Platform: Redux Toolkit, React Query, WebSocket, WebRTC, Service Workers, Web Security

Core CS & Backend: OOPs, Design Principles, Data Structures, Node.js, Express.js, MongoDB, MySQL

Build, Testing & Quality: Vite, AWS, Git, Azure DevOps, Jest, RTL, Vitest, ESLint, Prettier

Familiar With: Next.js, Cypress, Babel, Turborepo, Python, Docker

AI-assisted Development: Claude Code, Antigravity, Copilot, Codex, ChatGPT, Gemini, Perplexity

Experience

Rootquotient

Apr 2023 – Jun 2026

Software Developer Engineer II

Chennai

- Created a modular React **component library** and reusable **UI system** adopted across 3+ enterprise applications, reducing duplicate frontend code by **30%** and improving feature delivery speed by **20%** through standardized, reusable design patterns.
- Established performance optimized **CI/CD pipelines** using **Azure DevOps** and **AWS**, adding **automated builds, gitleaks, lint, tests, and artifact versioning**. Improved deployment reliability and reduced release cycles by **20-30%**.
- Enhanced **frontend performance** across React applications by optimizing rendering with **memoization, virtualization, and reconciliation tuning**. Minimized bundle size with **code splitting, lazy loading, tree shaking** and **Brotli compression**, alongside continuous performance monitoring. Improved load time and runtime responsiveness by **20-40%**.
- Engineered a real-time communication system for an **incident management platform**, enabling instant operations messaging, live dashboard & incident updates, management team coordination, and live route synchronization using **Google Maps API**. Built a scalable WebSocket infrastructure with data synchronization, reducing data inconsistency and improving response latency by **25%**.
- Contributed to standardize frontend setup at RootQuotient by designing a reusable **React boilerplate** with shared configs, git hooks, coverage, Continuous integration, structured folder architecture, and API integration strategies. Helped improve project setup time and delivery consistency by **40%**.
- Built a **service worker-driven deployment update flow** that detects new application versions on the active tab and notifies users to update the web app, ensuring reducing stale-client issues and improve adoption of the latest release by **30%**.
- Built a **custom rich-text editor** serving 5 modular apps and integrated **Razorpay** with secure **token-based authentication** to handle **59K+ monthly transactions**.
- Refactored a **data-intensive & pricing-heavy table rendering 50K+ records** using virtualization, memoization, and incremental data loading, eliminating blank-screen delays and significantly improving scroll performance and initial render by 45%; Implemented **Microsoft SSO via OAuth2** and added **React Query persistence** for **offline-ready** access and smoother data continuity across sessions.
- Built **Shadcn** and **Tailwind** based custom **responsive shared UI** packages used across **2+ FinTech SME loan applications**, reducing design effort by **40%** and improving UI consistency.

Software Developer Engineer I

- Implemented a high-performance **search and filtering system** in React with **debounce** logic, **pagination**, and dynamic tag filters. Boosted data discovery speed by **15%** and reduced backend query load by **20%**, delivering smoother user experience.
- Developed a role-based coupon management and generation system, resulting in a **15%** increase in conversions.
- Developed a modular React-based admin dashboard with **Ant Design** and **Chart.js**, enabling real-time analytics, user management, and role-based access. Streamlined workflows and reduced manual effort.

Innovaccer

Sep 2021 – Apr 2023

Associate Software Engineer

Noida

- Built and shipped complete custom dropdown features across 3.5M+ users in the 3+ healthcare products.
- Achieved 54% to 87% test coverage; reduced post-release defects by 20%.
- Worked with cross teams (design/backend/product) across 3+ products; participated in sprint planning and quality assurance.

Achievement / Leadership

- Organization:** Earned a 4/5 performance rating by managing & delivering projects within tight deadlines, and conducted organization-level yoga sessions after achieving a top-8 national ranking within 5 months.
- College:** Mentored the technical club, secured 1st prize for building an innovative application, and reached the finals of Smart India Hackathon (SIH).
